PRECISION WEIGHING FOR THE LIGHTEST OBJECTS

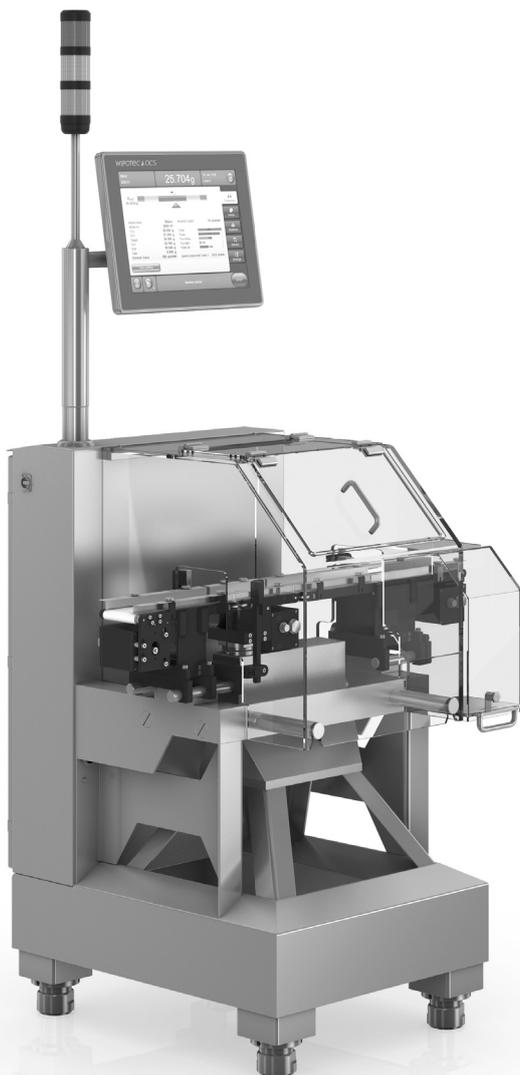

HC-A MI

The **HC-A-MI** is the perfect automated system for continuous and accurate weighing of ultra-lightweight-parts (for example, stickpacks) in the milligram range. Product infeed is product-specific and individually managed.

Vibrations in the production environment are suppressed through preload adjusted noise compensation (optional). Weight values are determined within fractions of a second. The classification of either accepted or rejected products, as well as the subsequent sorting, is done directly by the controls of the checkweigher.

Because of its automated 100% monitoring, the HC-A-MI provides new possibilities in quality assurance for sensitive products and production processes. It is easily integrated into any production line.

The use of high-tech Weigh Cells from WIPOTEC, which operate according to the principle of Electro-Magnetic Force Restoration (EMFR), guarantees optimal weighing results with the best technology.
